INDEX

Symbols

J_2-plasticity, 285
π-plane, 151
$\sigma_{0.2}$-stress, 147
3-parameter model, 369
4-parameter criterion, 183

A

absolute temperature, 519
acceleration waves, 690
acoustic tensor, 685
activation energy for creep, 375, 389
additive split, 628
adiabatic
  heating, 585, 668, 672
  process, 530, 557
adiabatic split, 671
admissible displacement field, 270
aging, 374
algorithmic tangent stiffness, 496, 499, 666, 669
anisotropic
  elasticity, 79
  hardening, 218
  tensor, 135
  yield criteria, 193
anisotropy, 72, 79
arc-length method, 473
Armstrong-Frederick evolution law, 344, 611
Arrhenius function, 375
associated flow rule, 224, 233
axiom of equi-presence, 561
axis of elastic symmetry, 136

B

back-stress tensor, 216, 292, 607
backward Euler scheme, 489, 656
Bauschinger effect, 214
Bergan's minimum residual force method, 470
BFGS-method, 458
biaxial
  compressive strength, 165, 185
  tensile strength, 165
bifurcated solution, 673, 683
Bingham model, 405
body force, 49
Boltzmann's superposition principle, 380
Boltzmann-Volterra material, 380
boundary conditions, 424
bounding surface model, 332
bulk modulus, 91
Burgers model, 131, 368

C

canonical state variables, 553
cap, 318
Carnot
  cycle, 528
  process, 539
Cartesian coordinate system, 3
Cartesian tensor, 11
Cauchy strain invariants, 30, 37
Cauchy's formula, 54
Cauchy-elasticity, 68, 103
Cayley-Hamiltons's theorem, 35
central difference approximation, 511
characteristic equation, 28, 455
characteristic stiffness tensor, 685

Clausius statement of the second law, 534
Clausius-Duhem inequality, 546
closest-point-projection, 418
Coble creep, 389
cohesion, 167
cohesive zone, 676
Coleman's relations, 563
collapse load, 265
compatible displacement field, 270
complementary energy, 71
compressive meridian, 155
concave function, 697
conditional stability, 512, 656
conjugated thermodynamic forces, 564
consistency relation, 233, 594
consistent tangent stiffness, *see* algorithmic tangent stiffness
constant strain-rate test, 357, 358
constant-volume gas thermometer, 541
constitutive relation, 67
constraint condition, 697
contact stresses, 479, 480
continuation methods, 467
continuity requirement, 236
continuum tangent stiffness, 497
convergence criterion, 451
convex function, 595, 697
convexity of yield surface, 225
convolution integral, 380
coordinate invariance, 105
corners, 619
correction matrix, 454
Coulomb criterion, 166
couple stress, 50
creep, 126, 357
  compliance, 362
  exponent, 388
  failure, 359
  hardening parameter, 374
  strain, 358
  test, 357
current yield stress, 204
current yield surface, 210
cyclic hardening and softening, 281

D

deformation mechanism map, 391
deformational plasticity theory, 95, 245
deviatoric
  plane, 150
  strain energy, 161
  strain tensor, 36
  stress tensor, 56
differential approach, 362
diffusional creep, 389
direct notation, 16
directional derivative, 601, 699
directional hardening parameter, 401
Dirichlet series, 371
Dischinger model, 374
discontinuous bifurcations, 683
discrete memory parameters, 336
dislocation, 390
displacement
  gradient, 22
  vector, 21
dissipation
  inequality, 250, 552
  potential, 567
distortional hardening, 218
divergence instability, 695
divergence theorem of Gauss, 61
Drucker's postulate, 225
Drucker-Prager criterion, 163
Drucker-Prager plasticity, 317, 613
Duhamel integral, 380
Duvaut-Lions viscoplasticity, 417, 507, 628
dyad, 18
dynamic recovery term, 402
dynamic yield surface, 413

E

effective
  creep strain, 397

plastic strain rate, 237
stress, 238
eigenmodes, 656
eigenvalue problem, 28
elastic
flexibility tensor, 75
fracturing material, 118
isotropic flexibility tensor, 92
isotropic stiffness tensor, 92
shake-down, 288
stiffness tensor, 73
strain, 204
strains, 87
stress rate, 258
elastic-ideal plastic behavior, 204
elasto-plastic
flexibility tensor, 252
stiffness tensor, 253
ellipticity, 686
embedded Runge-Kutta methods, 484
engineering shear strain, 26, 40
enthalpy, 556
entropy, 543, 544
flux term, 546
source term, 546
equations of motion, 61
equilibrium equations, 426
equivalent maturity time, 374
equivalent yield stress, 401
essential boundary conditions, 64
evolution laws, 234, 565
explicit midpoint method, 484
explicit scheme, 512
exponential hardening law, 207
external agency, 226

F

fading memory, 384
failure
conditions, 142
criteria, 147
mode criterion, 171
plane, 172
stress, 146
fictitious crack model, 676
finite element method, 423
first law of thermodynamics, 517, 523
flow rule, 222, 230, 620
flutter instability, 695
form-invariant, 107
forward Euler scheme, 432, 484, 489, 656
Fourier's
inequality, 557, 573
law, 562, 574
Frechet derivative, 699
friction
angle, 168
coefficient, 167
element, 405
fully implicit scheme, 489
fundamental solution, 673

G

Galerkin's method, 425
Gateaux derivative, 699
generalized
Kelvin model, 371, 635
Maxwell model, 369, 632
plane deformation, 48
plane strain, 48
plastic modulus, 235, 594
standard material, 571
generalized Euler scheme, 655
generalized mid-point rule, 487
generalized trapezoidal rule, 487
generic invariants
deviatoric strain, 38
deviatoric stress, 56
strain, 37
stress, 56
Gibb's free energy, 557
global shape functions, 425
gradient operator, 654
Green's strain tensor, 22
Green-elasticity, 70

H
Haigh-Westergaard coordinate system, 150
hardening
effect, 146
parameter, 210, 400
plasticity, 204
rule, 209
heat
engine, 533
equation, 547, 573
flux, 521, 525
generation, 243
supply, 526
Helmholtz' free energy, 552
Hencky model, 406
hereditary approach, 362, 378, 380
hidden variables, 211, 559
Hill's orthotropic yield criterion, 196, 310
Hoffman yield criterion, 200
Hohenemser-Prager viscoplasticity, 407
homogeneous function, 326
homogeneous material, 68
homologous temperature, 387
Hooke's law, 73
Huber-von Mises yield criterion, 161
hydrostatic axis, 150
hydrostatic stress, 56, 59
hyper-elasticity, 67
hypo-elastic material of grade zero, 142
hypo-elastic model, 141

I
ideal gas law, 524, 528
ideal gas temperature scale, 541
ideal gases, 528
ideal plasticity, 146
image stress, 327
implicit schemes, 489, 513
improper orthogonal transformation, 82
incompressibility, 100
incremental solution procedure, 428
index free notation, 15
index notation, *see* also tensor
anti-symmetry, 6
comma convention, 7
contraction, 5
dummy index, 4
free index, 4
skew-symmetry, 6
summation convention, 4
symmetry, 6
inelastic strains, 558
inhomogeneous material, 68
initial
strains, 86
yield criteria, 147
yield stress, 145, 203
yield surface, 210
internal
dissipation, 562
energy, 526
variable concept, 560
variables, 210, 559
intrinsic dissipation, 562
invariants
generic dev. stress invariants, 56
Cauchy strain, 30, 37
generic dev. strain invariants, 38
generic strain invariants, 37
generic stress invariants, 56
irreducible set of invariants, 122
irreversible processes, 530
irreversible thermodynamics, 548
isentropic process, 557
isentropic split, 671
isochoric, 524
isothermal
expansion, 524
processes, 530
isothermal split, 670
isotropic
fourth-order tensor, 92

hardening, 212
hardening parameter, 401
material, 79
scalar tensor function, 121
second-order tensor function, 120, 124
tensor, 16
tensor function, 108

J

joint invariants, 122

K

Kelvin degrees, 520
Kelvin effect, 584
Kelvin model, 128, 130, 366, 633
Kelvin statement of the second law, 532
kinematic boundary conditions, 64
kinematic evolution law of Mróz, 328
kinematic hardening, 215
kinetic energy, 526
kinetic equation, 400
Koiter's flow rule, 230, 620
Kronecker delta, 5
Kuhn-Tucker relations, 572, 593, 702

L

Lüder's bands, 683
Lévy-von Mises equations, 222
Lagrange multiplier, 33, 572
Lagrange's strain tensor, 23
Lamé parameters, 90
Laplace-transform, 386
latent heat, 586
law of Arrhenius, 389
leap-frog method, 484
Legendre transformation, 71, 556
limit
design, 265
load, 265, 466
point, 468, 624, 677
limit point, 255
line search, 461, 462
acceleration factor, 461
direction, 461
linear comparison solid, 681
linear elastic flexibility matrix, 78
linear elastic stiffness matrix, 78
linear hardening, 208
load parameter, 468
localization, 684
Lode angle, 153
lower bound theorem, 265
Ludvik, 207
lumped mass matrix, 512

M

major symmetry, 74
mapping stress, 327
Masing's rule, 325
mass matrix, 426, 653
master relaxation curve, 373
material axes of orthotropy, 85
material directions, 133
matrix
determinate, 2
orthogonal, 9
positive definite, 3
positive semi-definite, 3
scalar product, 2
singular, 2
square matrix, 2
symmetric, 2
trace, 37
maturity concept, 374
maximum principal stress criterion, 179
Maxwell model, 126, 129, 364, 631
mean stress relaxation, 281
mechanical dissipation, 562
Melan-Prager's evolution law, 295, 308, 608
meridian plane, 155
metric, 418
minimal function basis, 122
minor symmetry, 74
mixed hardening, 217, 303, 609
modified Coulomb criterion, 180

Mohr
criterion, 168
failure mode, 171
Mohr's circle
strain, 42, 43
stress, 57
Mróz model, 321
multilinear response, 321

N

Nabarro-Herring creep, 389
natural boundary condition, 64
nesting yield surfaces, 327
Newmark time integration scheme, 510
Newton's second law, 61
Newton-Raphson scheme, 657
nodal displacements, 425
nonassociated flow rule, 233
nonlinear optimization, 697
normal
strain, 24
stress, 51
normality principle, 224, 230
Norton's law, 388

O

observable state variables, 553
octahedral
criterion, 163
normal strain, 39
normal stress, 57
plane, 38
shear strain, 39
shear stress, 57
off-set strain, 147
Onsager reciprocal relations, 566
orthotropic creep theory, 399
orthotropic material, 84
out-of-balance forces, 653
over-shooting effect, 344
overstress, 407

P

path independent response, 67
path-dependent, 141
path-following methods, 467
perfect differential, 70
perfect plasticity, 146, 204
permanent creep strain, 361
perpetual motion
the first kind, 523
the second kind, 250, 523, 532
Perzyna viscoplasticity, 408, 502, 627
plane deformation, 47
plane of elastic symmetry, 81
plane strain, 47
plane stress, 59
plane waves, 693
plastic
collapse theorems, 265
dissipation, 232, 242
multiplier, 225, 593
strain, 146, 204
work hardening, 242
plasticity theory, 145, 203
Poisson's ratio, 86
polarization tensor, 685
positive definite, 74
postulate of maximum dissipation, 232, 572, 697
potential energy, 462
potential function, 69, 222, 224, 233, 553, 593
power hardening law, 208
Prandtl-Reuss equations, 222
primary creep, 359
primitive quantity, 549
principal
strain directions, 29
strains, 29
stresses, 55
principle of conservation of energy, 526
principle of material invariance, 107
principle of thermodynamics, 250
principle of virtual work, 62
Prony series, 371

proper orthogonal transformation, 82
proportional loading, 244
pseudo-dissipation function, 570, 633
pure shear, 60

Q

quadratic convergence, 495
quadratic form, 3
quasi-Newton methods, 455
quotient theorem, 14

R

radial loading, 244
Ramberg-Osgood formula, 206
rank, 455
rank one correction, 456
rank two correction, 457
Rankine criterion, 179
Rankine scale, 520
ratcheting effect, 281
rate of plastic work, 232, 242
rate-dependent, 359
rational thermodynamics, 548
recall term, 345
recovery, 360
reduced stress tensor, 292
reduced time, 373
reference load, 468
regular point, 620, 702
relative elongation, 24
relaxation
  modulus, 362
  test, 357, 358
  time, 372
representation theorem, 35, 114, 119, 201
response function, 103
retardation time, 372
reversibility, 70
reversible processes, 530
rheological models, 362
rheology, 362
Rieman integral, 380
Rivlin-Ericksen representation theorem, 120

S

Saint-Venant friction element, 405
saturation value, 402
secant approach, 118
secant stiffness, 435, 454
second law of thermodynamics, 250, 517, 532
second-order Runge-Kutta, 484
secondary creep, 359
sensitivity parameter, 645
sequence effects, 393
shear
  bands, 273, 683
  meridian, 156
  modulus, 91
  strain, 26
  stress, 51
simple shear, 48
single-step methods, 484
singular surface, 684
slip bands, 273
slip plane, 172
snap-back, 467
snap-through, 467
softening behavior, 146
softening plasticity, 204
specific entropy, 546
specific heat capacity, 529, 575
specific internal energy, 527
spherical strain tensor, 36
stability, 694
stabilized cyclic stress-strain curve, 281
staggered solution scheme, 670
standard iteration format, 437
standard linear solid, 369
state function, 523
state variables, 211, 400, 522
static boundary conditions, 64
static recovery term, 403
statically admissible stress field, 269

stationary creep, 359
Stieltjes integral, 379
stiff-ideal plastic, 204
strain
  cycling, 281
  energy, 68
  hardening, 239, 315, 617
  space plasticity, 260
  tensor, 21
strain-hardening model, 392
stress
  cycle, 225
  cycling, 281
  deviatoric tensor, 56
  tensor, 49–51
strictly convex, 698
strip method, 270
strong ellipticity, 689
strong formulation, 63
structural tensor, 132, 136
sub-stepping methods, 484
sublayer models, 325
superposition principle, 372
surface force, 49

T

tangent plane, 703
tangential stiffness matrix, 428
tangential stiffness tensor, 253
tensile meridian, 155
tension cut-off criterion, 181
tensor, *see* also index notation
  first-order, 12
  fourth-order, 15
  function approach, 125
  generators, 125
  isotropic, 16
  second-order, 14
  zero-order, 13
tensor notation, *see* index notation
tensor of thermal conductivities, 574
tensor of thermal expansion coefficients, 555
tertiary creep, 359
thermal
  capacity matrix, 655
  conductivity, 575
  conductivity matrix, 655
  dissipation, 562
  expansion coefficient, 87, 555
  external force, 655
  recovery term, 403
  softening, 639
  stiffness matrix, 655
  strains, 86, 555
thermo-elastic stress rate, 646
thermo-plasticity, 637
thermodynamic equilibrium, 545
thermodynamic temperature scale, 541
thermodynamics, 517
thermoelasticity, 86, 552
thermostatics, 548
time integration scheme, 509, 655
time-dependent behavior, 126, 357
time-hardening model, 374, 391
time-temperature shift principle, 373
total strains, 87, 204
traction vector, 50
transformation matrix, 8
transient creep, 359
transverse isotropy, 136
trapezoidal rule, 510
Tresca yield criterion, 159, 174
trial stresses, 478
triple point of water, 542
Tsai-Wu anisotropic yield criterion, 199
turning points, 468
two-step procedure, 470
two-surface plasticity model, 333

U

ultimate stress, 147
uniaxial
  compressive strength, 164
  strain, 47
  stress, 59
  tensile strength, 164

uniform dilatation, 47
uniqueness, 230, 673
unit fourth-order tensor, 376
universal gas constant, 375, 389
upper bound theorem, 265

V

variable matrix methods, 455
variable moduli models, 98
virtual displacement, 63
viscoelasticity, 128, 357, 360, 630
viscoplastic regularization, 410
viscoplasticity, 357, 387, 404, 627
viscosity coefficient, 126, 364
viscous strains, 630
viscous stress, 564, 632
Voigt model, 366
Volterra integral equation, 380
volumetric
    strain energy, 161
    strain tensor, 36
von Kármán pressure cell, 156
von Mises yield criterion, 159, 161

W

wave speed, 692
weak formulation, 62, 63
work hardening, 617

Y

yield function, 248
yield line theory, 266, 273
Young's modulus, 74, 86

Z

Ziegler's evolution law, 308
